

# JUPITER 80W INTERGRATED ALL IN ONE SOLAR STREET LIGHT

## 12 HOURS SAME BRIGHTNESS MODE

### Technical Parameters:

|  |  |                                     |
|--|--|-------------------------------------|
| Type Model                               | GL-JU-80                                   |                                     |
| Lumen                                    | 170LM/W                                    |                                     |
| Color temperature                        | 3000K 4000K 5000K 6000K 7000K              |                                     |
| Material+appearance treatment            | High end aluminum alloy+Anodizing          |                                     |
| Lithium battery                          | LifePO4 battery (350 WH)                   |                                     |
| Solar panel                              | High efficiency mono solar panel 18V (80W) |                                     |
| LED chip                                 | Original CREE 3030 led chip                |                                     |
| IP grade                                 | IP65                                       |                                     |
| Discharge time                           | 12hours lighting per day                   |                                     |
| Charging time                            | 6-7hours (bright sunshine)                 |                                     |
| Install diameter                         | Φ 60-65mm(Advice)                          |                                     |
| Working temperature                      | -25℃ — +65℃                                |                                     |
| Dimension                                | 650*355*27 mm                              |                                     |
| Warranty                                 | 3 years                                    |                                     |
| Remote control                           | Yes  |                                     |
| Color rendering index                    | Ra ≥ 80                                    |                                     |
|  |  |                                     |
| Solar lights controller status indicator | LED indicator status                       | Indicator light description         |
|  | Red (Flicker)                              | Solar panel is charging the battery |
|  | Red (On)                                   | Battery charged to full power       |
|  | Blue (Off)                                 | Battery without output              |
|  | Green (On)                                 | Light on                            |
